Tools needed:

- jewelers tweezers (see helpful hints below)
- 2-part all purpose 5-minute epoxy, clear drying

How to:

- Mix glue per instructions, apply to inside bezel areas on clasp (not on crystal).
- Set in crystal and adjust to make sure crystal is level.

Helpful hints:

- Instead of tweezers, use a toothpick with a tiny bit of museum putty or natural bee's wax rolled on the tip. It will stick to the crystal so you can position it and releases easily.
- If you get glue on the crystals or clasp, dampen (squeeze out all excess) a Q-tip in isopropyl alcohol to remove. This only works if the glue has not set.
